

**Salt River Ecosystem Restoration Project**  
**LANDOWNER REQUEST FOR RIVER MAINTENANCE**

**INTRODUCTION**

The Humboldt County Resource Conservation District (HCRCD) performs annual surveys of the Salt River Ecosystem Restoration Project's (SRERP) restored estuary and channel corridor to identify maintenance problems and to treat priority sites under the guidance of the SRERP's Adaptive Management Plan. The purpose of this form is to provide the Adaptive Management Plan's Project Management Team and Salt River landowners/managers a way to record and identify issues on their properties for evaluation and potential treatment by the Project Management Team which is comprised of members from the HCRCD, Salt River Watershed Council, Natural Resource Conservation Service, State Coastal Conservancy, and California Department of Fish and Wildlife.

Six kinds of problems can be treated under the SRERP maintenance permits:

1. Accumulated debris in the SRERP channel (such as downed trees and woody debris)
2. Erosion of SRERP constructed channel bank
3. Excessive sedimentation in the restored SRERP channel
4. Blockage of SRERP constructed drainage features
5. Excessive woody vegetation in the constructed SRERP channel
6. Noxious weeds in the SRERP area

By providing your contact information and a brief summary of maintenance problems via this form, you will be submitting your REQUEST FOR CONSIDERATION by the Project Management Team, which will in turn contact you for a visit to evaluate the site.
