

Salt River Ecosystem Restoration Project

Photo Monitoring – 2021

Annual photo monitoring of the restored restoration area is required for 10 years for each constructed phase of the project. The following photographs depict the restoration areas at multiple established photo points located on the implemented portions of the Salt River Ecosystem Restoration Project footprint. This area constitutes the construction extent for the Salt River Ecosystem Project up to year 2020. Photo points 145 to 163 are in an area restored in 2013. Photo points 115, 114, 109, and 110 are in an area restored in 2014. Photo points 103, 104, and 105, are in an area restored in 2017. Photo points 9, 8, 10, and 11 are in an area restored in 2019.

Given the large number of annual photos, photos provided in this report are a selection of years. In 2021, a new photo application was used to enable directional location. Though the 2021 photo dimensions are different than previous photos, the photos depict each sight accurately.
